

BAM GREEN Innovates Renewable Energy Services

BAM GREEN commenced operations. The occasion saw the presence of many distinguished invitees including top corporate heads from the business world.

A subsidiary company of BAM Holdings, BAM GREEN is headed by one of the pioneers in the local apparel industry, B A Mahipala, the Founder and Chairman of the parent company.

BAM GREEN is backed by the strength of its parent company, which adheres to a strong environmental policy in all their businesses. The group of companies focus on creating and maintaining a green and bio friendly internal and external environment by protecting and sustaining the natural environment.

“BAM GREEN is a company that is formed with a long-term vision to protect and sustain our future generations and the natural environment. Our long-term aim is to

offer renewable energy solutions for everyone from multinationals to the local businesses in villages,” said B A Mahipala, Chairman – BAM Holdings.

“The feedback we have received for our pilot projects have been very positive and we will continue this momentum by providing the best quality, which is reflected in all our businesses,” he added.

During a time that many renewable energy providers were closing down, BAM Green continued its journey and managed to successfully complete 25 pilot projects which enabled them to cover the domestic and industry sector.

As an answer to the ever rising cost of electricity in the country, BAM GREEN offers solutions and systems that generate clean energy, which results in 100 percent reduction in their electricity bill and the customer having to pay nothing at all for their use of electricity.

The company represents all scales including domestic, commercial and industrial. They also work on utility scale solar power plants with the hope of developing infrastructure and skills for the future generations. BAM GREEN stressed on the importance of quality during the event and the range of benefits that the customer can enjoy by working with them. They further talked about their past successes and current projects.

The company is committed to offer the world’s best solar module along with the most reliable inverter to all their customers. All major components which are manufactured with the use of latest technology are of European origin. The consistent quality of the products reflect that they are manufactured with ‘Stainless Steel’ and ‘Anodized Aluminum’ mounting structure that allows no corrosion. The team at BAM GREEN also elaborated on the expert engineering knowledge and dependable after sale services offered to all customers.

The complete range of solar modules offered by BAM GREEN is from the Norway based company REC Group, a global provider of solar electricity solutions. The representatives from the REC Group at the event emphasised on the sustainable, high-performing products, services and investment opportunities for the solar and electronics industries that they have been offering for the past two decades.

In parallel to the event BAM GREEN will be issuing a carbon conservation certificate to their clients in collaboration with a carbon consulting company.
