

DIMO And Tata Motors Introduce Tata Euro4 Powertrain Commercial Vehicles

Diesel & Motor Engineering and Tata Motors have introduced environmentally friendly Tata Euro4 Powertrain commercial vehicles to Sri Lanka. The Next Gen Tata Euro4 Powertrain range is capable of catering to all types of commercial transportation requirements. It offers an improvement of eight to ten percent fuel efficiency, improved power and torque, low maintenance cost and 80 percent reduction of particulate matter

Ranjith Pandithage, MD/ Chairman, DIMO said, “The launch of Tata Euro4 Powertrain commercial vehicles shows our commitment for improving quality of life towards sustainable development. We are confident that this will contribute for the triple bottom-line of the Company.”

Rudrarup Maitra, Head of the International Business, of Commercial Vehicles, Tata Motors said, “With the introduction of the whole Euro4 range, we are truly confident that our products will continue to excite customers in Sri Lanka with enhanced performance and comfort features. We firmly believe that the launch of the latest Euro4 range will further consolidate our leadership in the commercial vehicles industry.”

Customers will benefit from low operating and maintenance cost with higher fuel efficiency, increased profits with higher loading ability and less turnaround time due to the improved pulling power.

The Tata Euro4 Powertrain range comprises small commercial trucks, light and intermediate commercial trucks, heavy commercial trucks and tippers, 40 footer container haulers, light commercial buses and heavy commercial buses. The engines adopt Exhaust Gas Recirculation Technology and Selective Catalytic Reduction Technology to control the levels of harmful pollutant Nitrogen Oxide

DIMO and Tata Motors Limited introduce Tata Euro4 Powertrain Commercial Vehicles in Sri Lanka.
