Saroj Perera, Chairman and Managing Director, Douglas & Sons, addressing the Solar Dealers and Contractors at the official launch.

DSL Energy, a member of Douglas & Sons, announced a partnership with India's Okaya Power Group, a prominent brand entrusted with top- quality battery products worldwide.

Through this partnership, DSL Energy aims to offer off-grid solar energy solutions to the Sri Lankan market via Okaya Power Group's acclaimed product suite. This includes their range of batteries, panels, and inverters. As a result of this partnership, the Sri Lankan market will enjoy the best warranty conditions on such products, with three years for batteries, two years for inverters, and 25 years for panels.

Distributed through DSL Energy's 400+ networks of island-wide dealers, customers will benefit from installment payment plans, excellent after- sales service via local service centers, and the availability of products that will suit varying energy capacities as per customer requirements.

"We believe the sun is one of the most valuable yet underutilized renewable energy sources. Solar energy can drive entire industries and economies by powering households and businesses. Since DSL and Okaya share the same philosophy on production quality and consumer trust, we take great pride in partnering with Okaya to boost the Sri Lankan green energy sector with eco-friendly, reliable, and long-lasting battery products that Okaya offers," said Neranjan Jayasinghe, Head of DSL Energy.

"Our partnership with DSL Energy will add Sri Lanka to the growing list of over 50 countries in which we operate. As the world shifts towards harnessing the power of renewable energy, our holistic range of products acts as a catalyst to achieve the same. We are confident that together with DSL Energy's expertise in the Sri Lankan market, we will be able to build the most energized network of customers who power their lives with sunshine." said Anil Gupta, Vice President, International Business, Okaya Power Group.
