

‘Fuel efficiency with Magnofuel’

Next to heart disease, environmental pollution poses a great threat and hazard to humans as well as animal life. Many devices have been introduced in several countries to contain and combat air pollution following the vast increase in the number of motor vehicles in use. But most of these devices failed to produce effective results at minimal costs.

A Sri Lankan engineer EMR De Seram in 1980 invented a device to combat pollution and obtain 15% fuel saving but due to less encouragement he could not bring his invention to fruitful results. Now, a Sri Lankan entrepreneur and chairman of Energytech (private) Limited MS Abdul Gafoor Jp in collaboration with De Seram after years of further research and consultation with eminent men of scientific technology, has successfully made a breakthrough in this regard and founded a technique called “Magnofuel” which increases mileage by 25% both on diesel and petrol vehicles, generates more engine power and eliminates exhaust smoke by almost upto 86%.

The system offered Energytech (pvt) Ltd., is very simple, works on magnetic principals, costs very little and lasts a longer period of time. The Magnofuel unit can be fixed on petrol or diesel vehicles and the results are astounding, positive and definite results can be assured before covering 500 kilometers. Fixing takes only half an hour and is done at the company premises. The performance of the engine becomes smoother and generates more building power.

‘Magnofuel’ can be used on all types of engines, gasoline, diesel and propane. Typical applications are: cars, buses, vans, trucks, trailers, tractors, boats, three wheelers, motorcycles, locomotives, heavy equipment, generators etc. Introductory selling price of a magnofuel unit would be roughly, Rs 3500
