Niranjan Electricals: Powering Businesses

Power and energy management are two of the most vital aspects to be focused on when considering the effective operation of any business entity. Thus, providing their customers with power and energy solutions that invigorate the growth of the business, Niranjan Electricals has reached a trajectory of unparellel growth through their expertise in industrial, commercial and residential electrical installation.

By Hansani Bandara

The successful completion of all electrical installations of the entire premises of Cheval Blanc, a seven star resort hotel in Maldives is a reflection of the company’s capacity to embark on large scale projects of such kind—be it local or international—guaranteeing high quality, reliability and affordability while complying to IEE (Institute of Electrical Engineering) standards.

Continuing to expand their horizons, Niranjan Electricals is currently progressing with the electrical installations of four other large scale projects, which include the five and four star class resorts Fushivelavaaru, Maldives and Sun and Fun, Passekudah, Block D of Havelock City Apartment Complex and the plant facility of

Timex and Fergasam Garment Industries in Mannar.

Since its inception in 1987, Niranjan Electricals has been incorporating world class standards, innovation, creativity, honesty and integrity as core values. As such, the service provision of the company is not merely based on profit maximisation, but on institution building and caring for the society as a responsible corporate citizen.

Based in Moratuwa, the company operates its factory in Panadura where switch boards and cable management systems used in the projects of Niranjan Electricals are manufactured in-house.

“The Main Reason Why We Have Been Entrusted With Large Scale Projects Such As Star Class Resorts And Plant Facilities Is Due To The Flexibility Of The Company To Give The Best Solution To Our Clients At Very Competitive Prices.”

“The main reason why we have been entrusted with large scale projects such as star class resorts and plant facilities is due to the flexibility of the company to give the best solution to our clients at very competitive prices. We strive to give our customers the most durable solution thus ensuring that they have received the best in terms of quality and value for money,” said Dilhan Gunawardana, Managing Director – Niranjan Group of Companies.

The ISO 9001:2008 certification received by the company for design and installation of electrical systems is clear proof of the company’s policy of adhering to strict quality standards.

“Since accessories that are used in our projects are manufactured in-house at our factory, there is no compromise on quality,” Gunawardana added emphasising on the company’s capability of handling electrical installations of any kind, be it commercial or industrial.

Niranjan Electricals carrying out the projects of electrical installation and energy management for the entire factory network of Watawala Plantations, is another distinguishable feat. The versatile clientele of Niranjan Electricals, which include SriLankan Airlines, Commercial Bank of Ceylon, The Colombo Court Yard, Maliban Biscuit Manufacturies, Ranna 212 and Anilana resorts, Saffron Aviation, Mount Lavinia Hotel and the Official Residence of Ambassador of Kuwait is a clear reflection of the company’s expertise and exceptional service standards.
