What is crude oil?

Crude oil is a naturally-occurring substance found in certain rock formations in the earth. It is a dark, sticky liquid which, scientifically speaking, is classified as a hydrocarbon. This means, it is a compound containing carbon and hydrogen, with or without non-metallic elements such as oxygen and sulfur. Crude oil is highly

flammable and can be burned to create energy. Along with its sister hydrocarbon, natural gas, derivatives from crude oil make it an excellent fuel.
