

Seylan Merchant Portal Facilitates Contactless Payments

Posted on

Understanding the importance of facilitating contactless payments, Seylan Bank has enabled Informatics Institute of Technology (IIT) to manage their entire scope of digital payments through Seylan Merchant Portal.

Seylan Merchant Portal is a fully-fledged digital payment platform that offers a safer and more convenient option for carrying out digital transactions. The need for contactless payments today has become of paramount importance in the current environment, with consumers worrying about the health risks associated with handling coins and bank notes.

The portal will provide users the option to carry out cashless payments with just one click through the IIT website.

A notable feature of the platform is that it enables merchants to track their payments and check history with an array of different insights, enhancing user convenience.

Another key feature of this service is the digitization of payment initiation as well as communication - the platform through its user-focused design ensures easier access when sharing payment links while sharing reminders with customers through a variety of communication channels.

Through these services offered to IIT, the bank aims to foster an environment focused on customer convenience through innovative digital transformations - ensuring the safety of students, teachers and other key stakeholders involved in the day-to-day operations.

Understanding the growing requirement of accessibility and user-friendliness in today's society is utmost important. Hence, Seylan Bank plans to enable its Merchant Portal services and support system across a number of key industries to ensure service excellence and consumer convenience across a magnitude of national businesses, both big and small.
