SLT-MOBITEL AkazaLMS enables corporate employee capability development

As SLT-MOBITEL continues to play a pivotal role in driving Sri Lanka’s digital transforma- tion through its Cloud-man- aged offering, SLT-Mobitel AkazaLMS takes center stage as the nation’s leading Learn- ing Management System (LMS). SLT-Mobitel AkazaLMS offers a unique, locally devel- oped, comprehensive enter- prise learning solution de- signed to cater to diverse training needs without com- promising quality.

“Especially in today’s com- petitive environment where human capital is more impor- tant than ever, companies need to create a learning strategy that aligns to robust curricula,

employing relevant and avail- able learning methods and technology. Addressing this need, SLT-Mobitel AkazaLMS Cloud is an enterprise e- learning solution hosted in Sri Lanka on the top of a private cloud, providing corporate and institutional customers the ability to deliver their learning material to their users with zero-cost infrastructure. With greater convenience and with- out additional IT resources, customers can access their own training needs via a simple web browser," said Lakmal Jayasinghe, Chief Enterprise & Wholesale Officer, SLT.

Empowering corporates and educational institutes, SLT-Mobitel AkazaLMS is a comprehensive, locally developed platform containing a self- portal where users develop their e-learning and purchase it as a SaaS product. Mainly during these challenging times, when classroom lectures are not possible and distance learning methods vital, the SLT-Mobitel Aka- zaLMS facilitates exams, assignments, and quizzes, tailor-made and customized for corporates and educational institutes targeting their own specific needs.

The administrator portal allows corporates to create users of their enterprise, gen- erating courses, uploading these courses, and assigning it to relevant learners. The learning portal of the platform supports employees' learning at their convenience and on any device. Customers have also presented the option of branding their own e-learning portal according to the com- pany's identity. SLT-Mobitel AkazaLMS is implemented via the Azure stack platform, providing a more robust infra- structure and enhancing all customers' security features. Through Azure Stack, SLT-

Mobitel AkazaLMS's infrastructure can support multiple tenants or customers while guaranteeing each tenant's data is isolated and remains invisible to other tenants. SLT- Mobitel AkazaLMS can cater to large organizations' learning needs through Azure Stack; services can be offered to multiple departments while maintaining isolation.

Based on the platform's reporting feature, an administrator can track users' progress, obtaining a snapshot of each employee's learning skills and whether the training has enriched the employee and met the required goals. This completely digital platform also helps employees track their performance at any time.

The course content on the platform can be created and developed by the team. Based on organizational goals and needs, trilingual content can be curated and localized according to the organisation's requirements. While the course content is unlimited, packages are available based on various pricing levels and the number of

users to suit individual corporates and institutes.
