Apple has become synonymous with cutting-edge mobile computing solutions, including Macbooks, iPhones, and Apple Watches. The Macintosh product series, officially rebranded as Mac, was the cornerstone of Apple's business triumphs until the introduction of the first iPhone in 2007. According to Stocklytics.com, Mac's popularity is highest in Switzerland, with 24% of households owning a Mac.

The site's financial analyst, Edith Reads, comments: MAC products are renowned for their exceptional performance, state-of-the-art design and an unmatched user experience. The discerning choice of the Swiss underscores the enduring allure of

innovation, making Mac a hallmark of both sophistication and functionality in the digital landscape.

## **How Popular the Macs Are**

While Macs boast superior security and reliability compared to their Windows-based counterparts, they still need to cover ground in terms of sales. Dell, with its primary market in the U.S., overshadowed the Macs by recording an impressive revenue of over USD 102.3 billion, while the Macs generated nearly USD 30 billion, constituting about 8% of Apple's total sales in 2023.

Despite this sales challenge, Switzerland leads in Mac user dominance, followed closely by the United Kingdom and the United States, each with a 23% dominance. Australia isn't far behind, closing in with a 20% dominance, and the Netherlands with 16%. China, Germany, and France secure the sixth, seventh, and eighth positions, with shares of 15%, 14%, and 14%, respectively.

Switzerland's tech-savvy culture has driven the MAC movement, strongly emphasizing education and innovation. Swiss citizens quickly embrace the latest technological advancements, and the MAC's user-friendly interface and powerful capabilities align perfectly with Switzerland's forward-thinking mindset. This makes it the preferred choice for many users.

## **Why is the Mac Less Popular Compared to Other Brands?**

Apple's Mac ranks third in the United States after Dell and HP. Conversely, Apple faces formidable competition in China from Lenovo, Dell, and HP, which dominate the market. Despite Mac not being as widely embraced, it doesn't diminish its exceptional features. Macs shine with an impressive chip integrating a high-speed CPU and GPU, coupled with hardware and software exclusively from Apple, ensuring heightened reliability compared to other brands. However, consumer concerns often revolve around the pricing aspect, as Dell and HP boast quality features at more budget-friendly rates, challenging the value proposition of Apple products.

Besides, since MacOS is uncommon, most games or applications remain unsupported, including the popular game Diablo 4, causing consumers to hesitate to purchase them. While Mac faces tough competition in the global market, its unique features and reliability set it apart.
