Vision Care Elevates Eye Health Awareness at Medicare 2025

Vision Care stall at the Medicare 2025.

Vision Care was significantly impacted at the 14th edition of Medicare 2025, Sri Lanka’s healthcare exhibition. The event attracted local and international healthcare organizations, with over 150 stalls dedicated to the latest advancements in medical technology, wellness, and medical tourism.

Aligning with Glaucoma Awareness Month, themed ‘See the Future Clearly’, Vision Care focused on educating the public about early detection and prevention of glaucoma, a leading cause of irreversible blindness.

By actively participating in Medicare 2025, Vision Care reaffirmed its commitment to enhancing eye health awareness and providing world-class vision solutions to the Sri Lankan public.

The Vision Care stall engaged with over 1,500 visitors, offering free eye screenings, including visual acuity tests, potential refractive error assessments, eye pressure tests, and fundus photography eye examinations. These were conducted by a team of highly qualified Vision Care professionals who also provided expert guidance on maintaining optimal eye and hearing health. Visitors diagnosed with eye conditions were advised on the appropriate next steps for treatment and management.

Vision Care emphasized the importance of routine eye exams for the early detection of severe eye conditions, ensuring timely intervention. Additionally, an extensive range of corrective eyewear solutions, including prescription glasses and contact lenses, was available for those needing customized vision support.
