

WHITEKLAY TO PROVIDE ANALYTICS IN PARTNERSHIP WITH LANKA BELL

Posted on

Dr Prasad Samarasinghe, Managing Director, Lanka Bell.

Telecommunication service provider Lanka Bell announced a strategic col-laboration with data analytical services provider Whiteklay Technologies to enable busi-nesses to adopt a focused approach on solving problems towards AI (Artificial Intelligence) based business decision making.

Whiteklay Technologies is headquartered in Pune, India and has a strong presence in Asia Pacific, Europe and the Middle East. Whiteklay Technologies is a select and niche provider of data analytical services with a strong focus on Data Exchange and Data Economics. This focus has led to the company investing heavily on Big Data Consulting, Management, Implementation, Analytics and Training with a portfolio which boasts of strong engineering capabilities.

According to industry experts, a good predic-tive scoring strategy can help a company boost its bottom-line revenues by prioritizing its sales efforts, messaging and strategy.

The joint solution between the companies would provide Analytics as a service hosted on Lanka Bell's cloud platform and aims to enable enterprises to visualize

predictive and existing data patterns, which in turn will help enter-prises take fast decisions for prospective business.

Organizations can take advantage of this solution by consuming straightway end point dashboards which are also self-serviced without having to bother about the tiresome IT journey.

T Devanand, Regional Director, Whiteklay Technologies said of this service, “In today’s world not having a strong data background should not be a blocker for any organization to get some quick insights from data. If a trend line can be spotted in the data, Analysts should be able to ask the system as to “what changed?” giving them the flexibility to do slice and dice on the data at a real-time level and generate a dashboard as per their liking.

The fact is deploying such systems inside any organization’s environment takes a big initiative from tech, strategy and finance departments. If the tech team isn’t that strong, then acquiring skills to manage and run the system require a significant portion of the budget. This is where a lot of companies are looking to engage on get-ting Quick start Analytics as a Service.”

On the partnership Dr Prasad Samarasinghe, Managing Director, Lanka Bell said, “Data and analytics continues to be one of the most sig-nificant areas of growth and investment for many enterprises. By using Analytics as a service, organizations can cut down on huge setup costs without compromising Data Security. Moreover, they can focus on their core business instead of worrying about maintenance. We are pleased to announce the launch of the service through our networks and we have no doubt that it would bring immense benefits to Business entities. Our partner Whiteklay has done immaculate work in this field and we are confident about the success in our engagement.”

Among the company’s main offerings is BEST – Bell Enterprise Solutions Technology. This is a specialized suite of enterprise telecommunica-tion solutions which offers voice and text, data, IDC (Internet Data Center) and international services.

With its state-of-the-art digital network, Lanka Bell offers unmatched customer support and continues to challenge the industry through its wide range of services.
